

Abstract of the Disclosure

A status reporting system (SRS) automatically reports updated status of a project to an interested party based on status information stored in a status system. The SRS is communicatively coupled to the status system and includes a monitoring device
5 that contacts the status system to determine whether such status system has new status information stored therein and obtains such new status information from the status system. An internal mail device receives the obtained status information, ascertains from the received status information the interested party, locates an electronic mail address for the interested party, formats the received status information into a piece of electronic mail
10 which includes the received status information and the located electronic mail address, and forwards the piece of electronic mail to the interested party by way of an electronic mail service.
